

## SCOPE OF WORK

Working on behalf of Restore London Ltd, on a central London based project, VariBlast provided wet blasting and concrete sealing services over several levels of the renovated 148 Old Street building.

Following the demolition of the existing facade and interior finishes, VariBlast removed layers of plaster and paint from approximately 2,500m<sup>2</sup> of concrete columns, beams and soffit areas.

Once stripped back to bare substrate, VariBlast applied a KEIM fixative product (a silicate binding and fixing agent) to all prepared areas.
